**Models:**

**DAUF-38.100, DAUF-45.125**

**Removing/installing the shelves**

To remove any of the shelves from the rail compartment, move the shelf to the position where the notch of wooden shelf is exactly under the plastic post and then lift it up and pull out.

In order to replace the shelf, repeat steps described above in reverse.

## Installing door handle

All models where door handle is a basic equipment. Except DAUF-38.100

To install the door handle:

1. Place the handle over the pins on the door.
2. Open the door and pull the door gasket from the door frame to have access to the screws.
3. Fix the handle to the door with the screws. Be careful, do not fix the screws tight to avoid damage to the door.

## Installing door handle

**Model:**

**DAUF-38.100**

Do not overtighten the screws & do not use power tools to install the handle. Overtighten screw causes glass breakage.

Locate the handle ① over the fixing pins ③ of the door and using the supplied allen key, tighten the securing grub screws ② to fix the handle.

**Door reverse & hinge removal****Model:****DAUF-8.23**

This appliance has the capability of the door opening from either the left or right side. The unit is preset with the door opening from the left side. To reverse the opening direction, please follow below instructions.

1. Open the door, remove the two screws in the bottom hinge and lift out the door.  
Remove the hinge supporter of the lower door.

2. Remove the door shaft from the right upper hinge.
3. Install and tighten the left upper hinge from the plastic bag that includes the instruction manual.
4. Remove the right lower hinge.
5. Install the left lower hinge from the plastic bag that includes the instruction manual.

6. Rotate the door 180 degrees, install the lower hinge supporter to the left of the lower door.  
Mount the door and screws tight.

**Door reverse & hinge removal****Model:****DAUF-17.58, DAUF-19.58, DAUF-32.83, DAUF-32.78, DAUF-38.100, DAUF-39.121, DAUF-46.138, DAUF-46.145**

If desired, the door direction can be reversed after the appliance is installed. We recommend reversing the door direction with two people.

To reverse the door direction, follow the next steps:

1. Prepare a flat and soft surface to place the door on during the process.
2. Unscrew the three screws from the bottom hinge.
3. Unscrew the three screws from the top hinge.
4. Place the door on the soft surface.
5. Remove the hole covers.
6. Place the hole covers on the holes where you removed the hinges.
7. Rotate the door 180°. Align the hinges with the free holes at the top and bottom of the appliance.
8. Secure the top hinge with three screws.
9. Secure the bottom hinge with three screws.
10. Place the hole covers.

Remove counterclockwise knob (9) , each and reinstall them to the opposite end of the door.

5. Install hinge screws (1) on the left side. Install screws only part of the way so that hinges can slide behind the screw heads. Tighten hinge screws(1) .

## Door gasket removal/installation

**Models:** All models

The door gasket deformation, folding, warping and other faults will cause the leakage of cold air, insufficient cooling, and long-term nonstop of the compressor. When solving the problem, first try to use an electric hair dryer to blow the deformation part of the gasket with hot air, shake it back and forth while blowing, reshape the gasket with heat. Just replace a new gasket if it cannot be fixed.

When replacing a new door gasket, first pull out the old one, then align the four corners and four sides of the new gasket with the corresponding slot on the door, and then tap the gasket gently with a rubber hammer along the route of the gasket, as shown in the following photos.
